Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-9, 11, 16-18, 26 and 27, drawn to test strip and method for detecting an analyte, classified in class 435, subclass 7.72.
 - II. Claims 10, 12-15, 19 and 20, drawn to a test strip and method for detecting glucose, classified in class 435, subclass 14.
 - III. Claims 21-25, drawn to a kit, classified in class 422, subclass 61.
 - IV. Claim 28, drawn to a system comprising a test strip and automated instrument, classified in class 422, subclass 62

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are independent and distinct test strips and methods. Inventions are independent and distinct if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together and they have different functions i.e. the function of Invention I is to detect an analyte in a sample and the function of Invention II is to detect glucose in a sample.

Inventions III and I & II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product i.e. the kit of Invention III can be used to test solution pH.

Inventions IV and I & II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using

the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process for using the product as claimed can be practiced with another product and product as claimed can be used in a materially different process of using that product i.e. the system of Invention III can be used to test solution pH and the test strip and methods of Inventions I & II can be practiced manually.

Inventions III and IV are independent and distinct. Inventions are independent and distinct if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together and they have different modes of operation and different functions i.e. the kit of Invention III operates to contain components into a kit format and functions to maintain the components and the systems of Invention IV operates by automated instrumentation and functions to determine concentrations.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
